

Serialization in Manufacturing (MS031)

Not only pharmaceutical companies but also companies in food, electronics and automotive have started to serialize their products: they give a unique identity to each of their individual products sold in the market.

It enables them to comply with legislation requirements, it provides protection for the brand and it gives valuable insights of the use of the product.

That sounds promising but reality shows that the impact of a serialization project is easily under-estimated. To give products an identity, it is not enough to just print a code on the package on the shop floor. It touches the production lines, the manufacturing operations, the supply chain, the IT systems and more.

In this course, managers in IT or manufacturing and project teams are offered an insight in the domain of serialization, its opportunities and its impact. Joining the training helps to get started or to bring more speed in the initiatives already in progress.

Agenda

- Introduction
- Serialization: What and Why?
- Impact on Manufacturing and Supply Chain
- Requirements
- How to get started?
- Conclusions and Wrap-Up

This program is delivered as a one-day workshop (classroom) or in 2 four-hour sessions (online). It comprises several interactive activities ranging from plenary Q&A sessions to group assignments.

All participants who complete all assignments will receive the MOMi Education Certificate for this program.

Price and Schedule

Registration Fee: EUR 895

Schedule: see www.mom-institute.org or ask Sarah Knight (sara.knight@mom-institute.org).

Vision

MOMi's vision is to support manufacturers embarking on manufacturing excellence programs, MES/MOM deployment and the transition to the 4th Industrial Revolution.

MOMi offers best-practice education and business consultancy services to support the full change cycle from awareness and feasibility to continuous improvement initiatives in a dynamic operations environment.

MOMi provides independent education programs to manufacturers, preparing their people to leverage new smart technologies through the power of knowledge.

Our experience, your success

MOMi's Instructors Thought Leaders in Manufacturing Operations

- MOMi's team of instructors has extensive experience in manufacturing and education. The instructors are also excellent business consultants.
- MOMi's education services comprise a large number of standard courses and workshops on relevant topics.
- Programs are delivered as public sessions as well as inhouse. In the last case, the content can be tailored to your specific situation.
- MOMi's education programs and workshops are delivered by independent, professional instructors.

MOMi Education: A Comprehensive Set of Programs

Strategy & Awareness

- Smart Manufacturing & Industry 4.0 Strategy
 In this workshop, practical, deployable smart manufacturing strategies are discussed
 and the vision of Smart Manufacturing and Industry 4.0 examined. Based on
 considered Smart Strategies to start implementing the vision, the participants walk
 away with a plan of action to deliver that most valuable of commodities.
- MES/MOM for Executives
- The MES/MOM for Executives provides an independent view of MES/MOM and the benefits and pitfalls for manufacturers.
- Business Case
 This workshop provides practical approaches to identify the key business elements
 and risks and to justify MES/MOM projects. The participants gain experience in
 quantifying the potential benefits from exercises based on real cases.

Metrics & Performance

- · Metrics Framework
- This interactive workshop provides insight in how to define an appropriate metrics framework to monitor key aspects of manufacturing performance to drive improved real-time decision making. This includes strategic, tactical and operational aspects of manufacturing operations. The participants are trained in defining/selecting the relevant metrics in real cases and construct the metrics structure via a top-down and bottom-up approach. The Metrics Maturity Model is introduced as a guide for performance assessment.
- Continuous Improvement
 These Continuous Improvement workshops
- These Continuous Improvement workshops provides understanding of the various methodologies and when and how to apply them in manufacturing.
 - Introduction of Lean Manufacturing, Kaizen and Six Sigma
 Variability Reduction and Standardization
 - Variability Reduction and Standardization
 Continuous Improvement in Manufacturing
 - DMAIC process

Standards & Methodologies

- MOM related ISA Standards (e.g. ISA-95, ISA-88) These courses define approaches to integrating manufacturing systems with enterprise business systems, other manufacturing systems and automation & control systems. Models are presented to standardize manufacturing processes and activities.
- Cyber Security

This course is based on the ISA/IEC-62443 (ISA-99) standard: Security for industrial automation and control systems. An approach is presented to implement security effectively and efficiently in manufacturing and automation & control systems. Program and processes of a cyber security management system to sustain security are discussed and trained through exercises.

MESA MES/MOM Global Education Program

The MES/MOM Methodologies program instructs manufacturers, producers and solution providers on how to marry the power of modern Information Technologies (IT) and the process / project rigor to implement them with your operational expertise to unlock the notential within your operations.

Maturity & Alignment

Manufacturing Maturity

This workshop introduces the concept of the manufacturing maturity model to align the operational processes, the organization, the people's skill sets and the enabling and supporting technologies (IT). The ISA-95 Activity Model is used as a tool to determine the level of an organization's capability to have mature, robust and repeatable manufacturing operations.

• Business and IT Alignment

Alignment of Business and IT is a prerequisite for improving manufacturing maturity. The participants learn to assess and to create a step-by-step approach to enhance this alignment. Aspects included are business strategy, IT strategy, organizational and infrastructural processes and IT infrastructure and processes.

MOM Centre of Excellence

Successful execution of a manufacturing transformation strategy to increase their manufacturing maturity requires re-organization and alignment of corporate IT and manufacturing engineering priorities. The participants learn how to setup a MOM Centre of Excellence team that can bridge the gaps between the corporate enterprise and the local plants and connect manufacturing and IT in order to increase the manufacturing maturity and therefore the company's performance.
